# Opening Title

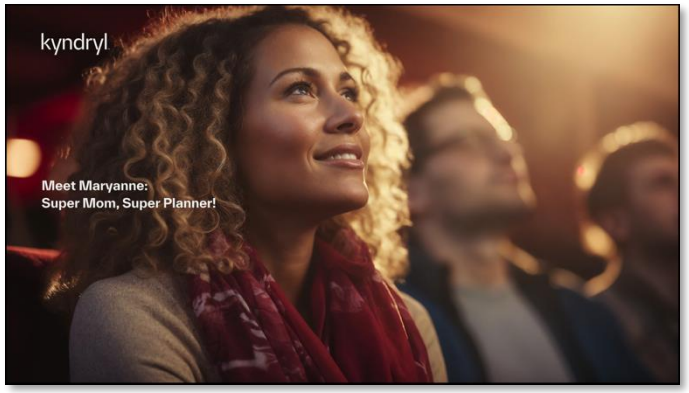
Establish threat, tone, and urgency

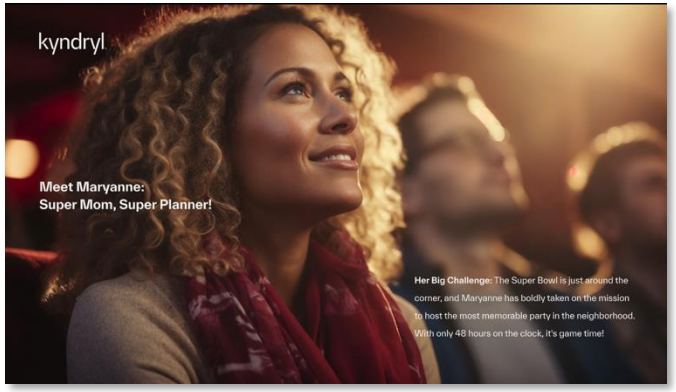
before personas appear

Time-lapse weather opener — wide exterior sky shot, clear sky shifting to dark cloud mass, wind and storm front building, maybe suburban or regional skyline beneath it

# Chapter One

NOTE: Each Screen Represents and interactive click





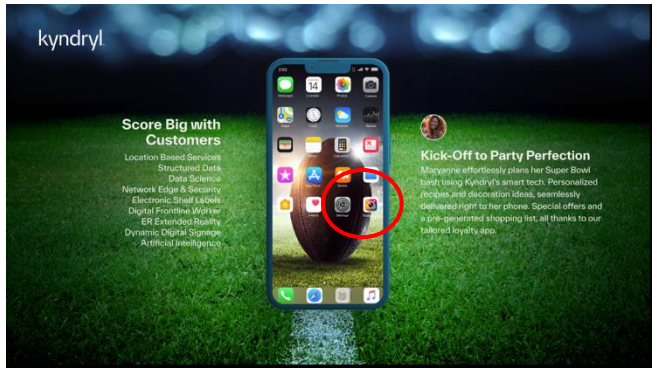
**Persona: Consumer**

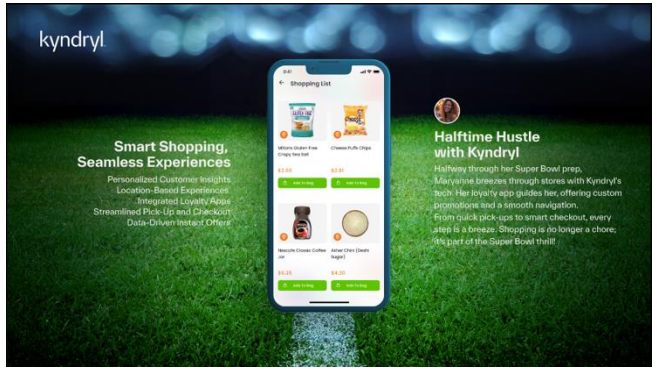
Screen 1: Elena will be utilizing websites and retail applications.

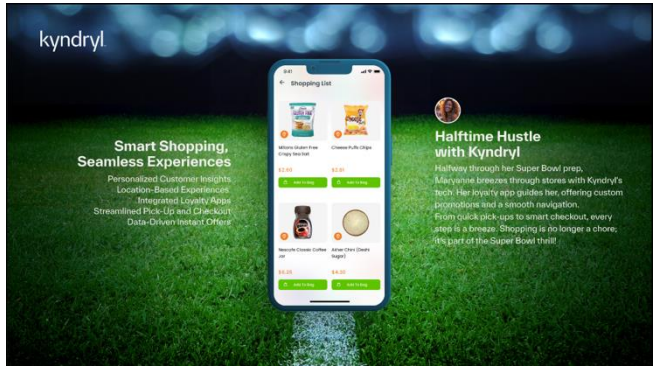
**Screen 2:** Elena is engaging in online searches and purchases for essential items required by her family, individual needs, even her pets prior to a major winter storm. The urgency is due to several days of confinement to the family home.

# Chapter One

NOTE: Each Screen Represents and interactive click







**Persona: Consumer**

Screen 3: Elena will be utilizing websites and retail applications on her mobile device

**Copy Ideation:** Elena is using her phone and clicks into her Harvest House (i.e Target) Loyalty App.

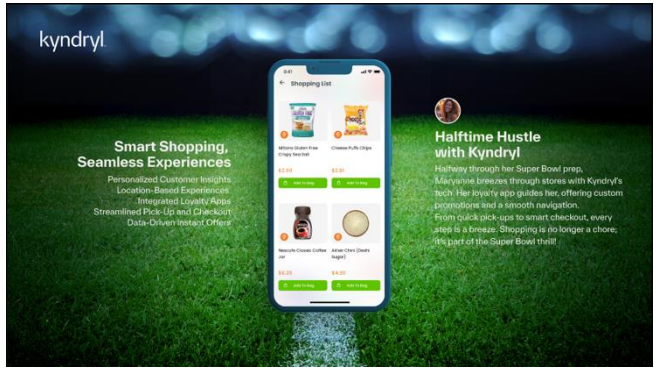
Screen 4: Elena opens her Harvest House application. The application is hyper-personalized and she is greeted with welcome back to Harvest & notified that she has a flu shot scheduled and a scheduled delivery per her subscription for paper towels are upcoming.

Screen 5: Due to the storm, the application asks if she'd like to delay and re-schedule the flu shot & paper towel delivery to next week due to the storm.

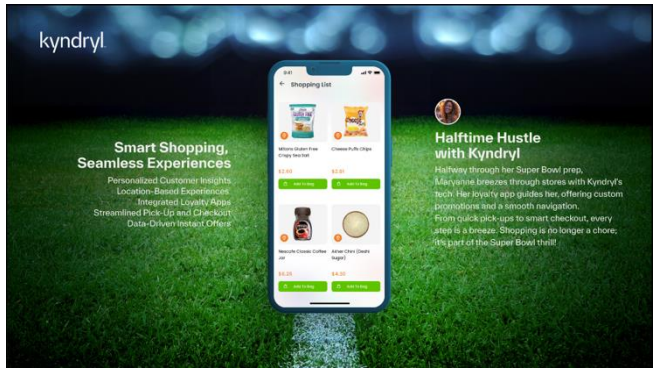
Screen 6: Elena clicks yes to re-schedule both her flu shot & subscription delivery of Paper Towels for next week.

# Chapter One

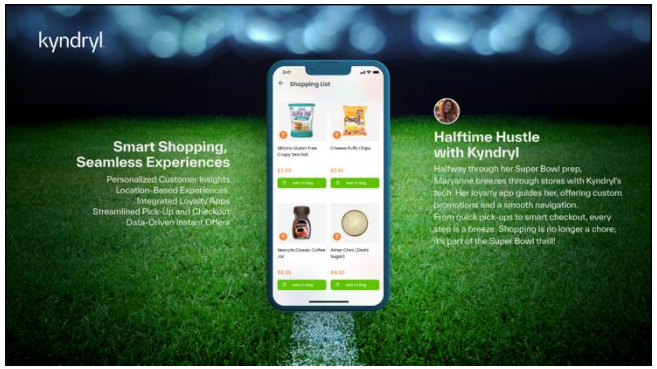
NOTE: Each Screen Represents and interactive click



Screen 7: Elena picks a date & time for the following week to receive her flu shot and reschedules the delivery of her paper towels.



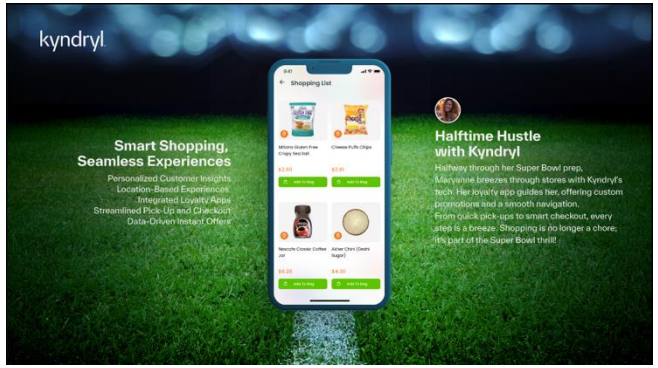
Screen 8: Elena proceeds to add the necessity items she and her family have identified into her online application shopping cart. Items can include: batteries, water, dog food, and pre-cooked meals as per her list of necessities.



Screen 9: Elena also needs to renew a prescription for her son's insulin, which she adds to her online shopping cart using the Harvest House pharmacy applications and clicks refill for pick-up tomorrow.

# Chapter One

NOTE: Each Screen Represents and interactive click



Screen 10: Elena looks at her list and is notified that home delivery is not likely, due to the weather. The alternative is pick-up in-store between the hours of 8 pm & 10 am the following day, which she selects.

# Chapter One

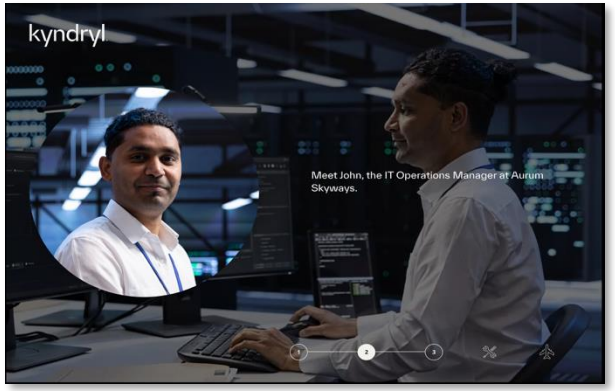
## Close of Chapter One

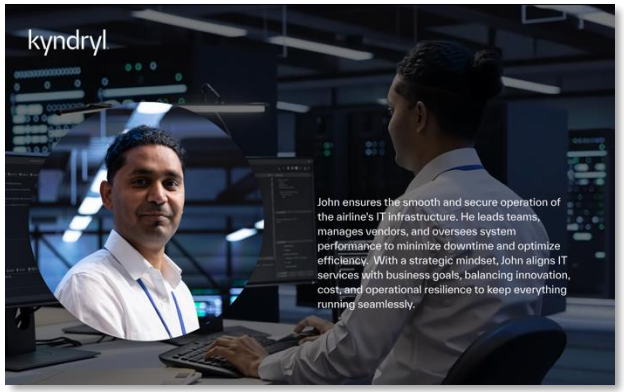
Show broad consumer-facing disruption across retail

4-box montage of disruption — empty shelves, long exterior line at a store, sparse warehouse pallets, map with red broken transit lines

# Chapter Two

NOTE: Each Screen Represents and interactive click





**Persona:** Vice President of Supply Chain Management – Harvest House

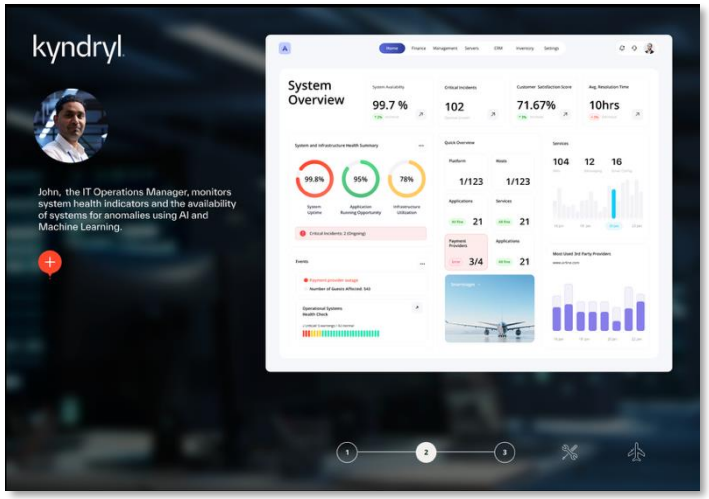
**Screen 1: Meet Scott the** Vice President of Supply Chain Management (SCM), visually situated in a meeting room using a laptop or projecting information.

**Screen 2: Persona set-up same visual:** The VP of SCM leads a team meeting, reviewing the dashboard situation with other key personas impacted by a weather emergency—such as the Director of e-commerce, Director of Retail Operations, and Director of In-store Inventory Management. Challenges emerge rapidly and require swift action.

- *Imagery may include personas gathered in a meeting room, collaboratively examining a dashboard that highlights critical challenges per script narrative.* (opening screen depicts meeting / titles will be written in script for presenter)

# Chapter Two

NOTE: Each Screen Represents and interactive click



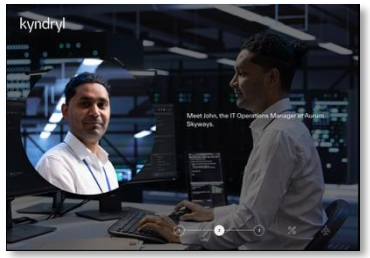
**Persona:** Vice President of Supply Chain Management- Harvest House

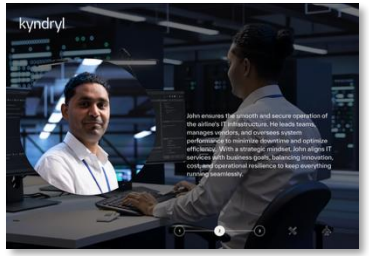
**Screen 3:** Dashboard displays business indicators at critical lows, failing to meet overwhelming demand due to delayed “reactive decision-making”—Before state, demonstrating conditions without Kyndryl Agentic

Four key measures as an example can be selected and showcased in a dashboard environment: inventory levels, logistics/delivery, warehouse/DC necessities, and supplier disruption forecast —all represented in red.

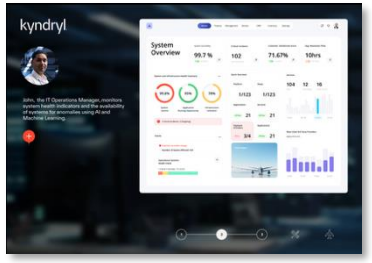
# Chapter Three

Simulation Ideation





Personas: Consumer / Director of Demand Planning / SCM Director. Screen shots are FPO & meant only for ideation. *Examples are FPO ideation purposes only*



**Business Endpoint Dashboard**

**Consumer Sample Endpoint**

**Jake to insert Product Demo Screen**

## Chapter Three: Ideation – Endpoint / Persona / Scenario

**Personas**

- Director of Demand Planning: Reviewing a dashboard forecasting demand based on product demo and narrative requirements.
- SCM Manager: Approving necessary SKUs and pricing as requested by the Demand Planner.
- Consumer: Full circle ending on the consumer receiving confirmation that their order is ready for in-store pickup between 8–10 AM.

**Endpoints**

- Consumer: Mobile or Laptop
- SCM Manager / Director: Laptop or Mobile Device (final selection by Bill/Team prior to development)
- Director of Demand Planning: Laptop or Mobile Device (final selection by Bill/Team prior to development)

**Scenario:**

Persona 1: Introduction of Director of Demand Planning, outlining their role and mapping to previous persona setups. The Demand Planner approves inventory purchases recommended by Agentic AI e-commerce tools and agents analyzing inventory and forecast needs based on data sources.

Persona 2: Introduction of Director of SCM, tasked with approving demand planning and Agentic recommendations for inventory and backend pricing as approved by Director of Demand Planning.

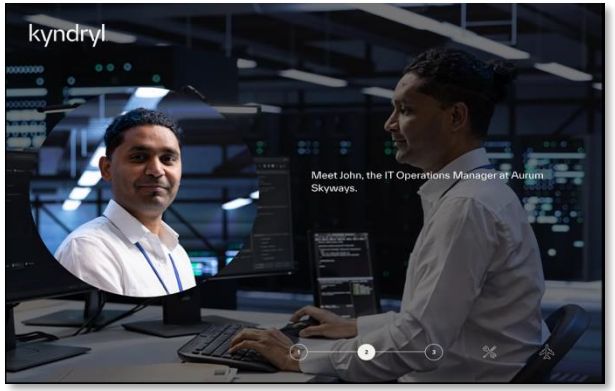
The consumer closes Chapter Three by receiving confirmation that the order will be available for in-store pick-up between 8–10 AM, a brief segment showing Elena viewing confirmation screens via her retail loyalty app on mobile or laptop.

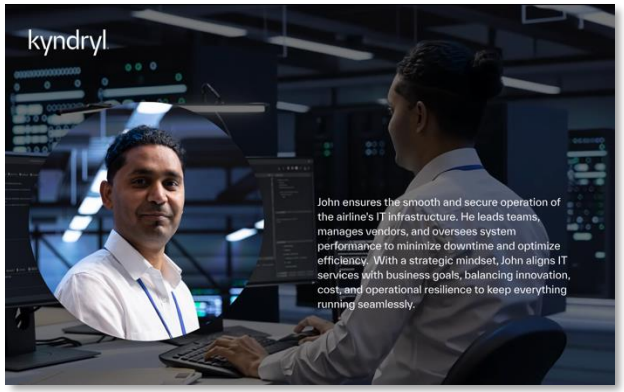
*Logistics/procurement screens will be needed, displaying the Demand Planner accepting agentic recommendations for inventory and the SCM approving backend pricing and immediate orders of essential items.*

****Product demos are focus & showcase in Chapter Three demonstrating how Kyndryl's Agentic Commerce can predict, solve and meet the demands illustrated in the holistic simulation.**

# Chapter Three

NOTE: Each Screen Represents and interactive click





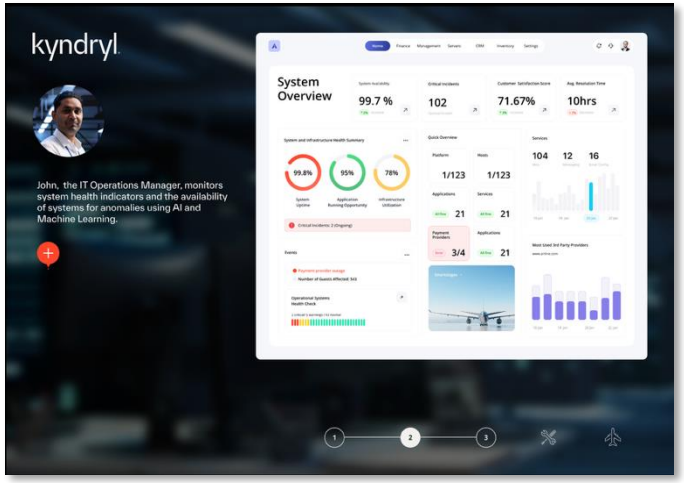
**Persona: Director of Demand Planning – Harvest House**

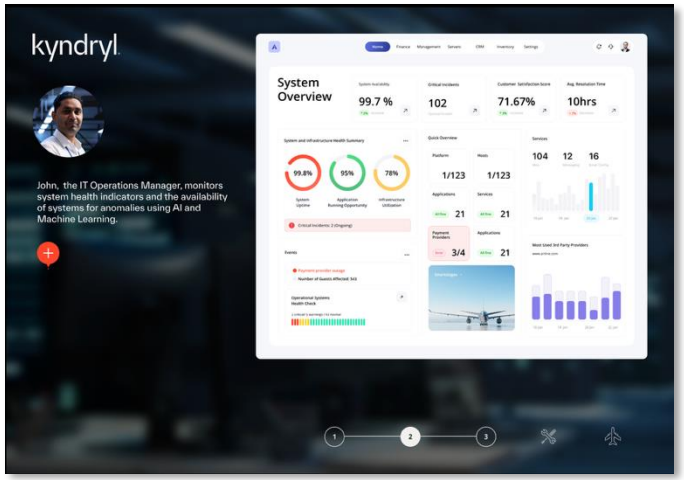
Screen 1: Director of Demand Planning intro and name. Meet Johnathan

Screen 2: Click and Introduction of Director of Demand Planning, outlining their role and mapping to previous persona setups. The Demand Planner approves inventory purchases recommended by Agentic AI e-commerce tools and agents analyzing inventory and forecast needs based on data sources.

# Chapter Three

NOTE: Each Screen Represents and interactive click





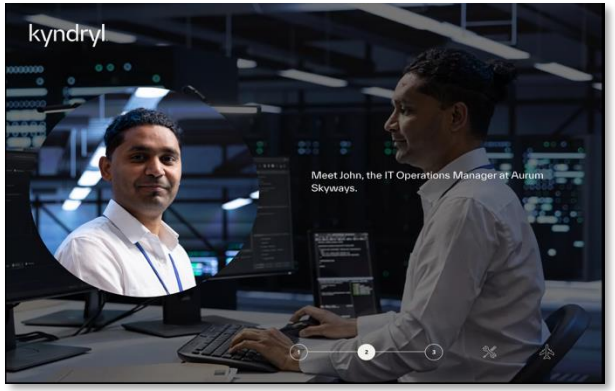
**Persona: Director of Demand Planning – Harvest House**

Screen 3: Johnathan is reviewing a dashboard forecasting the inventory demands powered by the planning agent. The agentic solution is providing real-time stock levels needed to meet the current demand variance of necessity products from both online and in-store channels.

Screen 4: Johnathon approves the planning agent's recommendation for the required levels of necessity items with a click to order. The system confirms and notifies the next persona in the business workflow (SCM Manager) who will notify the suppliers to meet the required inventory related to the critical SKUs.

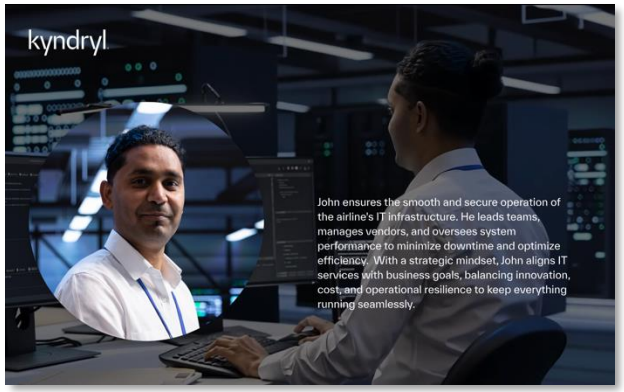
# Chapter Three

NOTE: Each Screen Represents and interactive click



**Persona: SCM Manager – Harvest House**

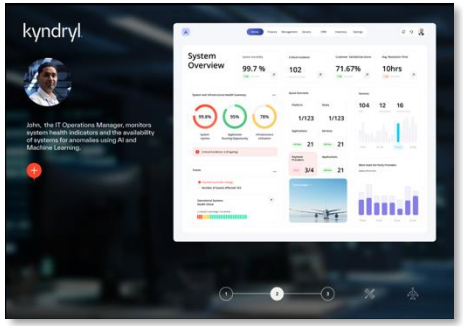
Screen 5: Meet SCM Manager Anna.

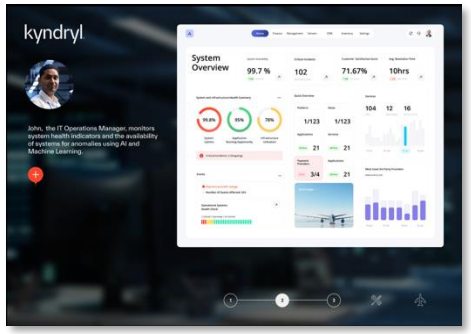


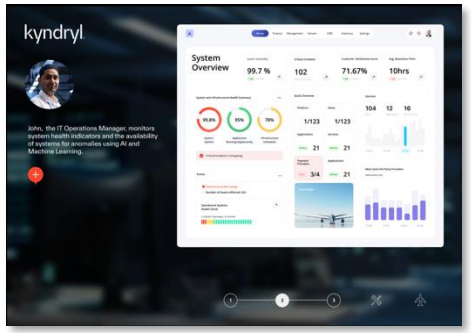
Screen 6: Anna is the Manager of Harvest's House Supply Chain. She is tasked with overseeing the flow of products from suppliers to stores or fulfillment centers.

# Chapter Three

NOTE: Each Screen Represents and interactive click







**Persona: SCM Manager – Harvest House**

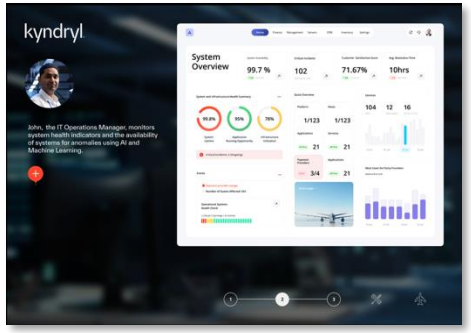
Screen 7: Anna receives a notification from her SCM dashboard. The notification is an alert mechanism coming from the Supply Chain Agent to approve immediate re-order of critical SKUs from relevant suppliers.

Screen 8: Anna clicks "view details" to drill in. Now she sees a consolidated incident overview. It highlights the root cause and shows the in-demand high priority impacted SKUs. It also highlights the risk window which closes at 2pm .

Screen 9: Now Anna clicks the resolve button. The supply risk and inventory analysis agents have already calculated the revenue at risk and the current stock across DCs and stores.

# Chapter Three

NOTE: Each Screen Represents and interactive click

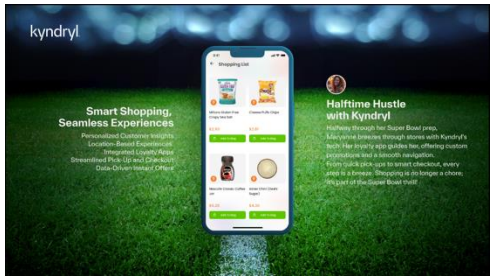


**Persona: SCM Manager – Harvest House**

Screen 10: Next, Anna scrolls down to the agent's recommendation panel where the inventory analysis agent and logistics agent have worked together to propose an emergency reorder plan with the appropriate suppliers who can fulfill on time and on budget. Anna approves the recommendation which triggers the appropriate inventory levels arriving in the DC and stores.

# Chapter Three

Simulation Ideation



**Personas: Consumer Finale**

Screen 11: The Harvest House app confirms and thanks Elena for her purchase and confirms her order will be ready for in-store pick-up I between 8PM-10 AM (the following day) **** BOPIS due to storm, inventory could run low so cap the pickup deadline***
